

Our Solution

MedCardApps has developed FrontDesk, a modern Electronic Health Record solution that increases the quality of service in any medical facility. Based on our experience from the e-Health market in Scandinavia, we have designed FrontDesk especially for African conditions. Ease of use, stability and compliance with international standards for medical data are some of the benefits of the FrontDesk solution.

MedCardApps

Our Goal

With focus on the African markets, we are implementing FrontDesk in hospitals, medical centers and clinics to enable easy electronic registration and tracking of a patient's medical status. Our vision is to improve healthcare by providing a solution that is easy to use, works on most existing computers and is affordable to every medical facility.

Reduce Paper and Paperwork

Our eHealth solution FrontDesk reduces the amount of paperwork by using centrally stored patient records and MedCards. This way we minimize the risk of losing patient information and provide fast access to patient files from anywhere.

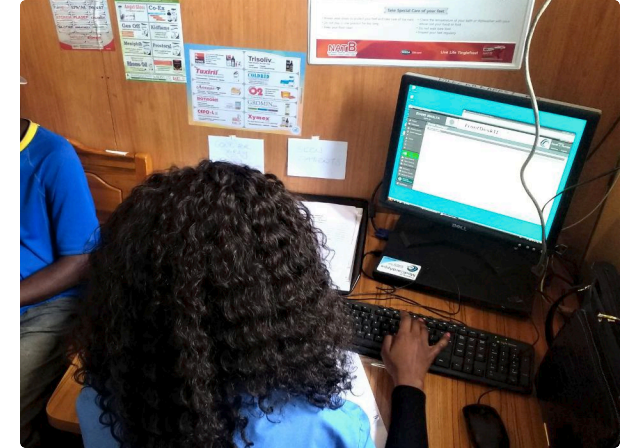

- MedCards are used to identify patients and act as a key for accessing medical journals but contain no sensitive data themselves
- MedCards can be combined with biometric verification to improve patient identification
- All medical journals and patient records are stored in a secure database
- Several different system configurations are available to suit medical facilities of all sizes, from mobile clinics to large hospitals

Increase Efficiency and Patient Safety

FrontDesk is designed to follow the workflow of a clinic from a patient being admitted to discharged. Staff members are given access only to the information they need through a personalized user interface.

- Nurses and doctors can work faster and more accurately thanks to easy tracing of a patients medical history, diagnoses and treatments
- Refer patients to other medical facilities with a single click of a button
- Having access to a patient's full medical history decreases the risk of mistreatment and thereby increases the patient's safety

Simplify Billing and Reporting

FrontDesk features an integrated module for generating bills and claim reports for insurance companies. Bills, claims and reports can be printed, emailed and stored in various formats directly from the system.

- Electronic billing saves time, reduces the risk of fraud and keeps track of invoices and transactions
- Easy to generate reports and statistics for internal and external use, for example to help tracking HIV/AIDS, malaria, TB and other diseases
- FrontDesk is compliant with ICD-10 and can be integrated with insurance platforms and exchange data with standardised systems.

"We know when information is easily accessible, doctors and nurses are able to provide better care and treatment for their patients. That's why we are dedicated to developing and making smart eHealth solutions available to all medical facilities in Africa". Phillip Kilara, CEO
