MedCardApps Offers Free E-health Platform in the Fight Against COVID-19

Due to the ongoing Corona pandemic, MedCardApps has decided to offer its commercial e-Health platform FrontDesk for free to healthcare facilities in the African market. Through this initiative the company hopes to help in providing more accurate and detailed reports on the spread of COVID-19 and other diseases in countries where the penetration for e-Health systems is low.

MedCardApps offers an application to create patient files where the number of tested, infected, recovered and deceased can be recorded. The company is now looking for partners and organizations that can help in reaching out with the offer to clinics and hospitals in Africa.

The product FrontDesk is an EHR solution that can be used for patient registration, diagnoses, test results, medication and follow-up examinations to create and store complete medical health records. The collected data is then used to generate reliable reports with demographic data on the current spread of the disease. MedCardApps has many years of experience of working in Africa and have, together with local healthcare professionals, designed the system with focus on ease of use. Another feature is that it works well on older model computers without permanent internet connection.

At present, a commercial version of the system is already being used at a number of clinics in Uganda and Zambia, but due to the current situation MedCardApps has decided to release a free version to help smaller clinics and facilities that lack resources or funding to invest in e-health solutions.

"It is important that everyone is helping to curb this pandemic, and since we are active in the health sector we have an opportunity to contribute by offering our product for free." - Phillip Kilara, CEO

If you are active in Africa and work with clinics that may benefit from a free EHR system, contact MedCardApps for more information about the offer on info@medcardapps.com or visit our website and download our information brochure describing FrontDesk from www.medcardapps.com

MedCardApps is an e-health company based in southern Sweden that develops patient record systems with a special focus on the African market. The idea is to offer an affordable and easy-to-use electronic patient record system to areas of the world where today there are no functioning tools to guarantee high patient safety and good quality of care.
